Hi 52 Limited,

I'm a broadly-skilled senior software developer, looking for opportunities to do more user-facing frontend work. Based on recommendations from a few friends, 52 Limited's focus seems to fit nicely with my skill set and direction.

I've attached a resume focused on my frontend work. I also have plenty of experience building services and data stores. I've left out lists of particular technologies fluencies since they would be lengthy; let me know if you'd like that level of detail in any particular areas.

Hope to hear from you soon!

Best,
Eric Drechsel
